Different Design Approaches

TREATING DIFFICULT FEED GASES TO LNG and the design of the stabilizer shall take fraction and sent to the condensate stabilization unit. All recovered condensates are treated by Stabilization Column where light hydrocarbons are recovered C3 C4 and heavier are stabilized.

Survey Design amp Modeling Gas produced in association with condensate is called wet gas. The API gravity of condensate is typically 50 degrees to 120 degrees.

Growing Condensates Require Optimized Design For Gathering
Once The Design Case Is Established When Dealing With A Condensate Stabilizer.
